

Readiness for Canadian ELDs

The Canadian ELD Mandate as established by the Canadian Council of Motor Transport Administrators (CCMTA) requires that **as of June 12, 2021**, all carriers operating in Canada, who are currently required to use paper or electronic records of duty status, will be required to use a certified ELD. This also carries with it a third-party certification process for all electronic logging devices used in Canada. This certification is to be conducted by a CCMTA-accredited, third-party organization and bears a significant cost to the ELD provider.

Saucon is taking appropriate steps related to the Canadian ELD requirements and mandated certification process through product development, testing, and verification. In the U.S., the FMCSA ELD requirements called for self-certified ELD devices. Saucon led the way in ensuring compliance with U.S. ELD regulations by taking the extra step of a third-party certification of its ELD product. Saucon's experience with third-party certification of the Saucon ELD device gives a strong competitive advantage for the Canadian ELD certification process.

Saucon is also not new to the differences between Hours-of-Service rules in the U.S. vs. in Canada. The existing ELD functionality from Saucon already includes the Canadian ELD rule sets for passenger and property Hours-of-Service. Saucon is fully committed to completing the final step required for Canadian compliance, in accordance with the new Canadian ELD regulations. Highlights of the complete Saucon Canadian ELD functionality include:

- Utilization of Saucon's proven onboard telemetry technology.
- Continuation of the use of the existing Saucon Touch driver display.
- Completion of the required third-party Canadian ELD certification process, and commitment to the required ongoing yearly 're-certifications'.
- Adherence to compliance requirements in accordance with Canadian ELD regulations.
- Use of the new Saucon PROX II onboard computer device.
- Saucon's proven experience building relationships with enforcement officials and government agencies to ensure compliance of all products.
