POWERING INTELLIGENT TRANSPORTATION

Future-Driven Tech for Smarter, Safer Fleets, with Real ROI

Delivering measurable value across your entire fleet

At Saucon, we're reshaping fleet safety, performance, and efficiency with smart, scalable technologies. New 2025 solutions are designed to deliver measurable return on investment (ROI) by reducing costs, improving safety, and optimizing operations across your fleet.

Vision AI

A leap forward in driver safety, Saucon Vision AI uses onboard cameras, computer vision, and real-time feedback to detect and alert drivers to critical events—reducing incidents and improving accountability.

Remote Service Tool (RST)

Eliminate unnecessary road calls. RST enables technicians to diagnose issues, clear codes, perform regens, and fine-tune performance remotely—saving time, reducing tows, and minimizing downtime.

Dual Camera Solution

Easy-to-install two-way camera captures windshield, driver, and passenger views in a single unit. Ideal for vans, shuttles, and motorcoaches, working independently or with the Saucon IoT3 multi-camera system—delivering scalable video surveillance at a competitive cost.

Bring Your Own Device (BYOD)

Empower drivers with the flexibility to log hours via a handheld device, while maintaining full access to Secure Start and Driver Portal functions. It's a driver-friendly solution with no hardware overhead. Smarter technology. Real savings. Proven results.

Smarter Technology. Real Savings. Proven Results.

Let Saucon help you unlock more value from your fleet—today and into the future.

Upcoming Calendar of Events 2025

[View More Details](#)

July 20 - 23

SCMA - AMA - GMOA - MCASC
Regional Meeting,
Atlanta, GA

August 05 - 08

IMG
Strategic Alliance Meeting,
Richmond, VA

August 14

PA Bus Safety Day
Summer Safety Meeting,
Middletown, PA

August 19 - 21

BISC / Bus MARC
Safety Council Meeting,
Minneapolis, MN

SAUCON

SPOTLIGHT

TECHNICIANS JUST GOT A REMOTE UPGRADE:

MEET SAUCON'S REMOTE SERVICE TOOL (RST)

Saucon Technologies introduces the **Remote Service Tool (RST)**, a powerful data link solution that allows your technicians to remotely access diagnostics using their service tools. This enables them to troubleshoot issues and optimize performance without ever leaving the shop.

With an RST connection, technicians can diagnose issues, clear fault codes, trigger diesel regens, and adjust performance settings—all remotely.

Built on RP1210C protocol connectivity, RST supports **Cummins Insite®**, with more integrations coming soon.

The result?

Fewer unnecessary tows, lower maintenance costs, and better vehicle uptime - keeping your fleet moving and your shop more efficient.

Saucon's RST

Remote Efficiency. Smart Results.

SAUCON

Integrated Bus Solutions that improve Safety and Performance.

Saucon's intelligent transportation platform offers a full suite of cloud-based solutions for today's passenger transport industry.

With GPS tracking, safety systems, video surveillance, remote diagnostics, electrification, and Vision AI, our IoT-enabled tools boost visibility, streamline operations, and deliver real time and cost savings.
