SAUCON WEBINARS 2026

Saucon New Educational Offerings for 2026

Beginning in January, 2026, Saucon's **Mike McDonal** will be offering Webinar sessions every other month covering topics relative and timely to industry concerns and needs.

Photography: Terrapin Blue

DATE: JANUARY 20, 2026

The first session is entitled **"How to Use Saucon Telematics in Developing a Driver Performance Program"**.

This informative session will review not only the key components that make a successful driver performance program, but how to initiate and facilitate the program once it is active within the fleet.

DATE: MARCH 23, 2026

The second session is entitled **"The Safety Management Cycle"**. This process is the six phased investigative process that FMCSA as well as other investigative agencies follow to cite faults in the processes and patterns of unsafe practices.

A deeper dive will be done into the finer points of each of the six parts of the cycle offering guidance through the investigative process. During the session, the available Saucon tools and products will be introduced to help any operation become more efficient and compliant while taking the burden off the staff.

ADDITIONAL SERVICES 2026

Additional services are also beginning in 2026 for comprehensive reviews of motorcoach operations. Building upon Mike's 42 years of extensive experience, his unique qualifications give a thorough review of operational aspects to ensure a company is as efficient, compliant, and profitable as possible.

To discuss working with Saucon and specifically Mike McDonal for a review of your business or to submit suggestions for further webinar topics, please reach out to **Mike McDonal** directly via email at mmcdonal@saucontech.com.
